

The Shower Filter for Your Health and Beauty

“A long, hot shower can be dangerous. The toxic chemicals are inhaled in high concentrations.”

- Dr. John Andelman, PhD., Bottom Line; 8/87

Fluoride Removal

Chlorine & Chloramine removal

Coconut Activated carbon

When you take a shower and smell chlorine, do you ever wonder what effect it is having on you? Did you know that taking a hot relaxing shower is really toxic as heat converts chemicals into toxic gas? It is like drinking a gallon of chlorinated water through the pores of your skin.

Instead, imagine a shower that is luxurious like a walk in a rain forest near a waterfall. You can pamper your skin and protect your health, with pure, clean, energized water.

Introducing the Ecowaterhouse Shower Filter

a new health and beauty focused product. This multi-functional filter is formulated to effectively remove chlorine, chloramine, fluoride, heavy metals, such as lead, mercury, nickel, chromium, and other dissolved metals. It controls scale, bacteria, and algae. In addition, the energizing minerals in this filter, such as tourmaline, far-infrared, and certified grade alkaline minerals, create a healthful atmosphere, filled with negative ions, and far infrared radiation. It will make your skin feel smoother and your hair silky soft.

Unlike other de-chlorinating shower filters, the Eco Water Shower Filter is specifically engineered for efficiency and performance. Its unique filter design produces water the nature intended, turning your shower into a fabulous spa-like experience.

The Ecowaterhouse Shower Filter will give you a peace of mind for at least 2 years.
